Support and comfort with the Benjamin ComfyNest

The ComfyNest and its accessories are a complete set that meets the needs of protecting and supporting the position of premature babies. The unique design of the ComfyNest makes it the most flexible and versatile supporting aid available for Developmental Care. The ComfyNest not only provides fully configurable support for the infant, but also includes unique accessories, such as a pillow to prevent skull deformation. The ComfyNest was developed according to the latest insights in the field of Developmental Care in close cooperation with NIDCAP specialists.

THE BENJAMIN COMFYNEST

The ComfyNest supports the position of the baby in various postures. The granulate filled edge is firm yet flexible to provide optimal boundaries. The ComfyNest with its four straps stimulates a middle-line orientation and hand-mouth contact, making the baby feel more comfortable.

The unique features of the ComfyNest:

- Firm yet flexible granulate filled edge to provide optimal support of position.
- Four straps to help the infant keep the middle line position and provide support.
- Anti-slip material on the bottom to prevent the nest from moving, even when placed on a tilted bed.
- Special hand pocket at the bottom to easily and comfortably move the baby in the nest.
- Filling and cover washable separately at high temperatures.
- Available in two sizes.

WHY A NEST?

It has been shown that premature babies better maintain their body temperature when lying in a nest, which has a positive effect on weight increase. In addition, a supported position is beneficial to respiration and neurological development.

DRIRELEASE® FABRIC

The ComfyNest and accessories are made of the advanced drirelease® fabric, which dries four times faster than cotton and remains odour free. Even after frequent washing at high temperatures, the fabric will still feel comfortable. The nest will not shrink and the colors will stay intact.

THE BENJAMIN COMFYPILOW

The ComfyPillow is a firm granulate filled pillow, designed to support the head in supine position, as part of a strict position change schedule. This is important to prevent skull deformation and/or a preferred posture.

The unique features of the ComfyPillow:

- Supports the head in supine position, preventing skull deformation.
- Anti-slip material on the bottom.
- Filling and cover washable separately at high temperatures.
- Available in two sizes.

THE BENJAMIN COMFYSTAR

The ComfyStar is a granulate bag, meant to support and position the baby. The ComfyStar can be laid over the baby to give support and consolation.

The unique features of the ComfyStar:

- The shape and the granulate filling provide extra support and consolation.
- Filling and cover washable separately at high temperatures.

THE BENJAMIN COMFYKISS

The ComfyKiss is a scent cloth that mother can wear on her body, for example in her bra. The cloth takes on the mother's scent, after which it can be put next to the head of the baby. Odour plays an essential role in the bonding between mother and child. The use of the ComfyKiss can contribute to this.

The unique features of the ComfyKiss:

- Brings mother's scent to her baby.
- A set of two: one for mother and one for baby.
- Can be attached to the ComfyNest with the ribbons.
- Ribbons for baby to hold and to prevent grabbing of tubes.
- 100% cotton.
- Washable at high temperatures.
